## **Potential Topics for Discussion**

- I. What We Currently Know – The Social Norms Model and Evidence
- II. Good Data and Good Messages: Do's and Don't's
- III. Targeting Subpopulations?
- IV. Evaluation Issues

## What We Currently Know

- Traditional approaches to reduce problem drinking (health education, health terrorism, and social control) have limited or no effect.
- Grossly exaggerated perceptions of the drinking norms pervade all campuses and subcultures.

## Long Tradition of Theory and Research on Peer Influence and Conformity to Peer Norms

But what about  
Perceptions of Peer Norms?

*What students think are the most common attitudes and behaviors of peers regarding alcohol are often inaccurate.*

- Most students overestimate:
  - 1) the permissiveness of peers
  - 2) how often peers drink
  - 3) how much peers drink
  - 4) how frequently peers incur consequences
  
- Most students underestimate:
  - 1) peer use of protective drinking strategies
  - 2) peer support for campus alcohol policies

**Students' Misperceptions of the Norm for the Number of Drinks Consumed the Last Time Other Students "Partied"/Socialized at Their School**

(NCHA Nationwide Data from 72,719 Students Attending 130 Schools, 2000-03)

Source: HW Perkins, M Haines, and R Rice, Journal of Studies on Alcohol, 2005.

Accuracy of Perceived Drinking Norm				
Under-estimate by 3+ Drinks	Under-estimate by 1-2 Drinks	Accurate Estimate	Over-estimate by 1-2 Drinks	Over-estimate by 3+ Drinks
<b>3%</b>	<b>12%</b>	<b>14%</b>	<b>32%</b>	<b>39%</b>

**71% Overestimate Peer Drinking!**

## What We Currently Know

- Perception of the peer norm is the strongest predictor of personal drinking level compared to all personal, demographic & environmental factors that have been researched.
- Bystanders become more prevalent due to misperceptions of the norm.

## Consequences of Misperceptions

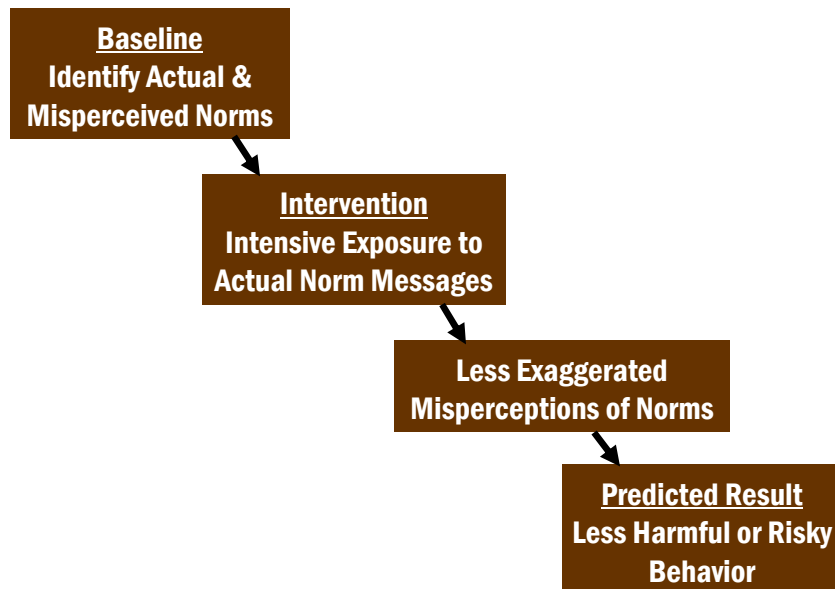

- **Definition of the situation produces a “Reign of Error”**
- **Problem Drinking Increases**
- **Layers of Misperceptions Compound**
- **Opposition is Discouraged from Speaking**
- **Intervention by Others Declines**
- **“Carriers” of Misperception Contribute to the Problem**

*Source: H. W. Perkins, “Designing Alcohol and Other Drug Prevention Programs...,” 1997*

## Normative Education

*Letting more people know that most of their peers drink in moderation helps even more peers make responsible decisions about drinking.*

## The Social Norms Model

## **Examples of Strategies to Reduce Misperceptions and Strengthen Positive Norms**

- **Print media and PSA campaigns**
- **Peer education programs and workshops for targeted risk groups**
- **New student orientation presentations**
- **Counseling interventions**
- **Curriculum infusion**
- **Electronic multimedia**
- **Online Personalized Normative Feedback**

## **Getting Good Data**

- **Sample Size and Frequency**
- **Representative Sample**
- **Measures of Injunctive (Attitudinal) Norms**
- **Measures of Frequency of Use**
- **Measures of Quantity**
- **Measures of Negative Consequences**

## Creating Good Messages

- Majority behavior that is positive
- Include images that identify local population
- Avoid identifying individuals
- Do not display the problem behavior
- Provide the source and make it large enough to make it part of the message
- Avoid overuse of logos and branding

**67%** of all  
students consume alcohol  
once per week  
or less often  
or do not drink *at all.*

**SOURCE:** Spring 2011 Survey of all HWS students with 836 respondents, conducted by BIDS 295

**If Someone says,**  
**"College students drink a lot..."**

**Let them know the facts:**

**Most HWS students when they party drink one to four drinks or do not drink at all.**

**0 to 4 Drinks**

**Healthiest Choices**

HOBART AND WILLIAM SMITH COLLEGES

**Get the Facts**

**Get the facts**

**HWS students typically drink alcohol once a week or less.**

Source: Data collected in the Spring 2000 BD295 survey of a representative cross-section of 327 students.

**Most students avoid problems of alcohol misuse:**

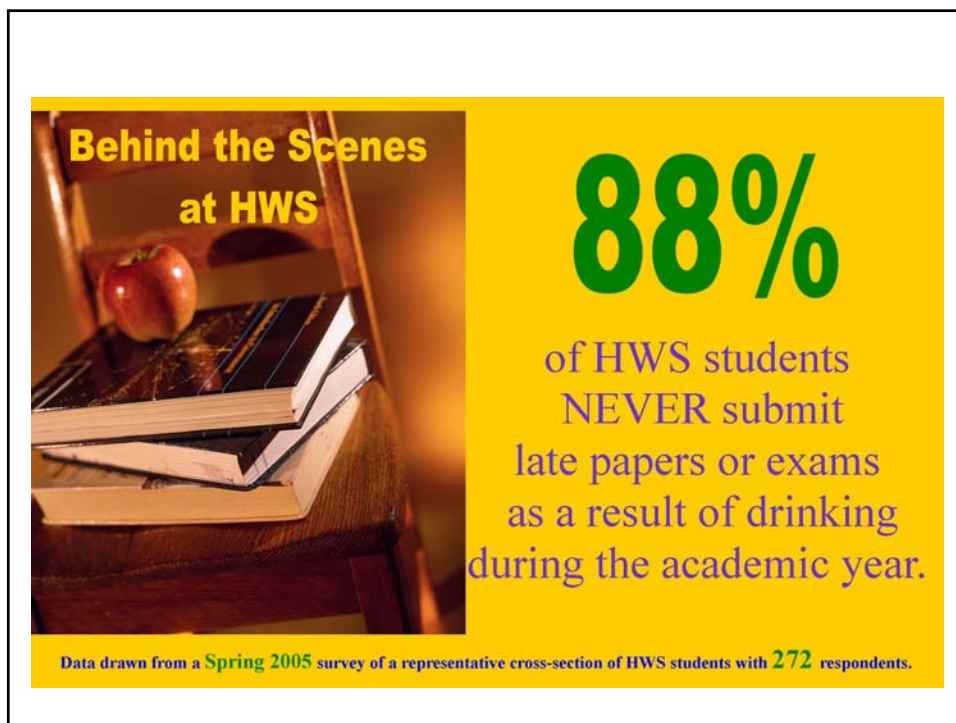

- 92%** of HWS students *NEVER* submit late papers or exams as a result of drinking during the academic year.
- 87%** of HWS students *NEVER* cause property damage as a result of drinking during the academic year.
- 81%** of students *NEVER* cause damage to relationships as a result of drinking during the academic year.

**The majority of athletes in season drink only twice per month or less often.**

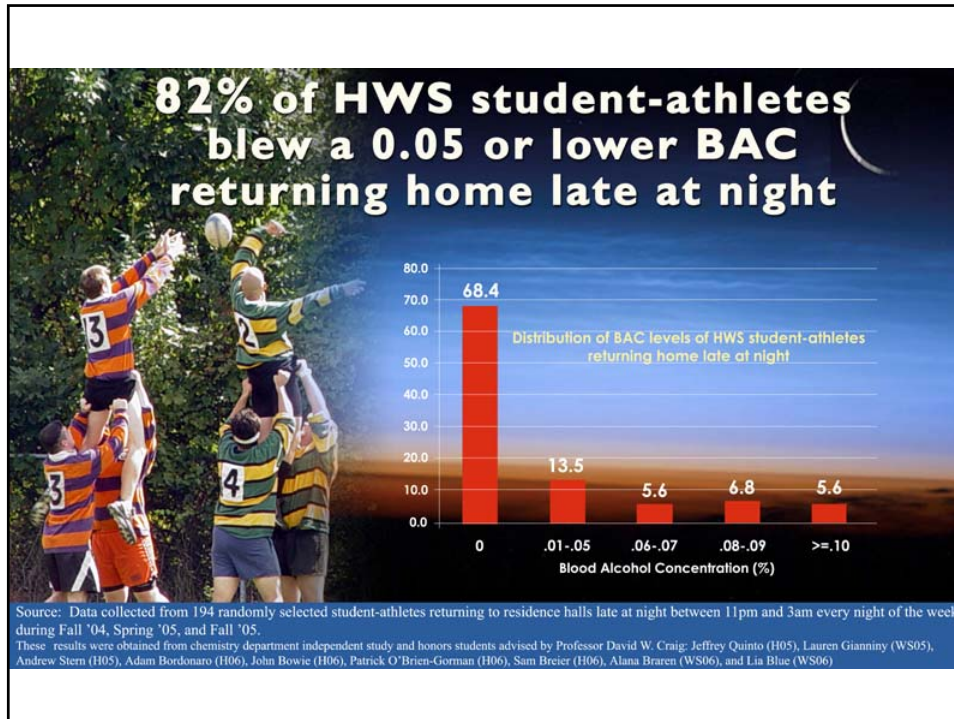

Source: Data drawn from all intercollegiate athletes (N=99) participating in a Spring 2000 mail survey of a representative cross-section of HWS students.

**Did you know that...**

**7 out of 10 HWS student-athletes (70%) believe one should never use tobacco**

Source: Fall 2005 Web survey of all HWS student-athletes with 369 respondents (79% of all student-athletes on campus).

**82% of HWS student-athletes never injure themselves or others as a result of alcohol consumption during the academic term.**

Source: Data drawn from a November 2001 survey of 414 HWS student-athletes (86% of all athletes on campus).

## Most HWS Student-Athletes

*Make Healthy Choices*

The majority...

- never use tobacco (67%)
- eat at least three meals per day (59%)
- sleep at least seven hours per night (69%)
- consume alcohol no more than once per week or do not drink at all (59%)

Source: November 2006 web survey of 345 HWS student-athletes (71% of all intercollegiate athletes on campus).

## When is the Social Norms Approach Most Effective?

- **Clear positive norm messages**
- **Credible data**
- **Absence of competing scare messages**
- **Dosage is high (ongoing and intense social marketing of actual norms)**
- **Synergistic strategies**
- **Broad student population receives message in addition to any high-risk target groups**

Source: H. W. Perkins (ed), The Social Norms Approach to Preventing School and College Age Substance Abuse , 2003

## **Research on Effects of Perceived Norms and Social Norms Intervention Programs**

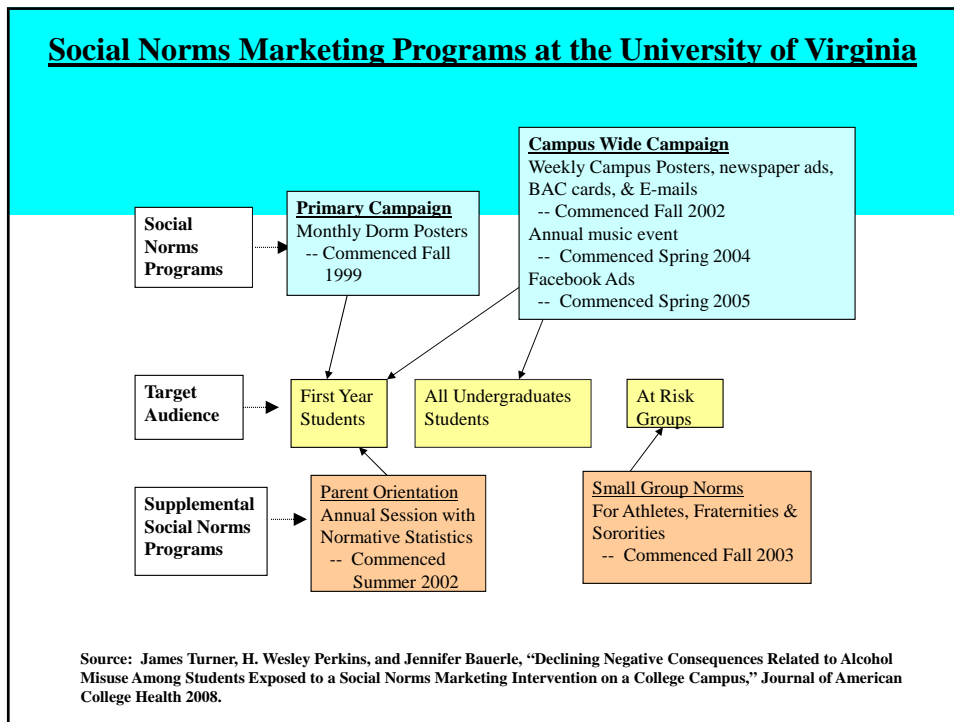

- Multi-site cross-sectional studies
- Longitudinal panel studies
- Brief intervention experiments using random assignment
- Longitudinal pre/post case studies of school populations
- Experiments with experimental and control counties
- Experiments with experimental and control classroom interventions
- Longitudinal experiments randomly assigning institutions to experimental and control conditions

## **Heavy Drinking Reductions at Five Diverse Institutions Initiating a Social Norms Approach (2 Year Rates of Change)**

- **Hobart & Wm. Smith Colleges, NY -21%**
- **University of Arizona -21%**
- **Western Washington University -20%**
- **Rowan University, NJ -20%**
- **Northern Illinois University -18%**
